## Ideal protection against vandalism

All monitors need physical protection in extreme conditions where dust, humidity, rain or snow exist. Our design offers suitable protection for a displays in outdoor applications. It's design allows maximum monitor protection in extreme temperatures (-40C/-40F to 40C/104F). The one inch thick insulated AK fiber inside the doubled wall cabinet creates a protection against internal condensation. Two thermostatic blowers insure good air flow through the cabinet during warm temperature. All vents have filter protection to prevent dust and insect infiltration.
